MA313/MA335 Communication skills

(Version 18.09.2022)

James Cruickshank and Niall Madden

September 2022

How this works

- If you take both **MA313** and **MA335**, then your task is to write a short (1000–1500 words) essay and to give a 10 minute presentation.
- If you only take one of these modules, just write an essay.
- Essay deadline: 5pm, Friday 18 November, 2022 (i.e., end of Week 11).
- Presentations: Week 12.

Scope and Topics

- We provide a list of possible topics (see below), but you are welcome to suggest your own.
- Irrespective of the topic you choose, you should consider your class-mates as the intended audience for your essay and presentation. We wish to assess your skill at researching a topic, and communicating what you have learned. Your depth and breath of your knowledge is of secondary importance.
- You may express preferences but we cannot guarantee that we'll be able to accommodate these.
- Send an email to Niall (Niall.Madden@UniversityOfGalway.ie) stating
  - your first choice of a topic,
  - (optional:) your second choice, and
  - (optional:) a topic that you don't want under any circumstances,
  - your ID number.

  by Monday, 26 September, 2022.
  Include the module code(s) in the email subject line.

Suggested topics

Consider writing an essay on one of the following topics. Where the topic has not been covered in any module you've taken, your essay should introduce this to your class. If the topic is elementary (e.g., covered in a module you've already taken), consider presenting a tutorial on it, including background, explanation, and exercises.

1. ~~Should abstract algebra be taught at second level?~~ (Brendan C)
2. Symmetry in Islamic art
3. ~~Geometry and M.C. Escher~~ (Dara J)
4. Platonic solids.
5. Archimedean solids
6. Snelson tensegrities
7. Polyominoes.
8. ~~Musical temperament~~ (Kirsty M)
9. Cauchy's Rigidity Theorem
10. Newton vs. Leibniz
11. The Poincaré Conjecture
12. Positive definite matrices and Cholesky factorization
13. The QR decomposition
14. Norms of vectors and matrices
15. What do eigenvalues *really* tell us about a matrix?
16. The pseudo-inverse of a matrix
17. ~~Three ways to compute the determinant of a matrix~~ (Paul McG)
18. Graphs of matrices, and matrices of graphs

Possible topics: The mathematics of mathematicians

Essays may be based on the life and work of an eminent mathematician. They may include a short biographical section, but the main emphasis should be on the impact and legacy of their work. This should be reflected in the title, for example "Olga Taussky and the Development of Matrix Theory". When contacting Niall, you should indicate what aspect of this person's work you plan to study. Tip: MacTutor may be a better starting point than Wikipedia.

19. Niels Henrik Abel and...
20. André-Louis Cholesky and the solution of the normal equations.
21. Gene Golub and ...
22. ~~Katherine Johnson and the mathematics of the space race~~ (Aoife M)
23. Ada Lovelace and ...
24. Maryam Mirzakhani and ...
25. Issai Schur and ...
26. Terrance Tau and ...
27. ~~Alan Turing and Cryptoanalysis~~ (Jeffrey F)
28. Dorothy Vaughan and ...
29. Maryna Viazovska and ...
30. Some other notable mathematician and their mathematics.

Structure

- At the very least, your essay should consist of a title (followed by your name, ID number, email address, and the module(s) in which of MA313 and MA335), an introduction, one main section, and a bibliography. Include your name, ID number, email address
- A conclusion is optional but recommended.
- You may wish to divide your essay into further sections.
- Don't attempt to be exhaustive. Instead, choose key points that you find interesting and learn and write about these.
- Your essay should tell a story. Its structure might help you prepare for your presentation (Week 12).
- Approx length: 1000–1500 words.

Literature

- You should **cite** all sources that you use.
- Ideally, you should rely on several sources.
- Choose one of the many common citation styles and stick with it.
- Pieces of text that are taken verbatim from sources should be clearly indicated.
- When in doubt, use your own words.
- Wikipedia and similar pages can be useful starting points but they are **not** peer reviewed scientific resources. More importantly, Wikipedia is a tertiary source. However, it has links to useful primary sources.

What happens next

- By 5pm, Monday 26 September, submit your choice to topic on the MA313 Blackboard module (See "Communication Skills: Essay topics").
- By 5pm, Monday 17 October, submit your progress report (more details to follow).
- By **5pm, Friday, 18 November** upload your essay, in PDF. Your submission will be checked for originality using TurnItIn.
- **Only for students registered in both MA313 and MA335.** In the week 21-25 November you will give a short presentation and submit your slides from the presentation on Blackboard by 5pm, Friday, 25 November (more details on presentations to follow).

Tentative Marking Schemes

(This marking scheme may be revised before final submission).
Selecting topic and progress report:

- Submit an agreed topic (2 pts)
- Submit an a progress report, with essay outline, and information on bibliography (2 pts)

Essay:

- Use and correct citation of peer reviewed reputable sources. (4 pts)
- Evidence of thorough research on topic. (5 pts)
- Clarity, style and structure of essay. (5 pts)
- Accuracy of mathematical content. (4 pts)

Presentation:

- Structure (5 pts) and content (5 pts) of slides;
- Pacing of presentation, clarity of verbal explanations, ability to answer questions (8 pts)

Note: you will have to submit your slides to be graded separately.
