

Week 03, Lecture 3

Continuity and The Intermediate Value Theorem

Dr Niall Madden

School of Mathematical and Statistical Sciences, University of Galway

Thursday, 3 October, 2024

These slides are by Niall Madden, with some content based on notes by Dr Kirsten Pfeiffer, and some, such as the figure opposite, taken from Strang & Herman's "Calculus". The typos are Niall's.

Outline

1 News!

- Assignment 1
- Exercises from class

2 Recall... continuity

3 Types of discontinuity

4 Intermediate Value Theorem

- Examples
- Application
- Some terminology
- Examples

5 Exercises

For more, see Section 7.9 (Continuity) in *Modern Engineering Mathematics*:
https://search.library.nuigalway.ie/permalink/f/3b1kce/TN_cdi_askewsholts_vlebooks_9780273742517

And I *highly* recommend Chapter 2 (Limits) in **Calculus** by Strang & Herman.
See openstax.org/books/calculus-volume-1/pages/2-introduction. Section 2.4 (Continuity) covers today's material.

Reminder

- ▶ **Assignment 1** has a deadline of 5pm, Friday. You can access it on Canvas... 2425-MA140... Assignments.
- ▶ The **Tutorial Sheet** is available at https://universityofgalway.instructure.com/files/2040359/download?download_frd=1
- ▶ A new assignment will be posted later this week.

.....
For help with the assignment, attend a tutorial. The schedule is on the Canvas “Course Information” page:

<https://universityofgalway.instructure.com/courses/35693/pages/2425-ma140-information>. Note the change of venue for the Irish language tutorials (Tue at 1, AMB-G021).

.....
Support is also available at tutorials and **SUMS**.

- ▶ Exercises are now at the end of each set of slides
- ▶ These are not for homework, but they are very useful for exam preparation.
- ▶ Solutions will be posted each week.
- ▶ Solutions to Week 1 Exercises:
<https://universityofgalway.instructure.com/courses/35693/files/2060104>
- ▶ Solutions to Week 2 Exercises:
<https://universityofgalway.instructure.com/courses/35693/files/2060111>

Recall... continuity

Definition

A function f is **continuous at** $x = a$ if

1. $f(a)$ is defined, i.e., a is in the domain of f ,
2. $\lim_{x \rightarrow a} f(x)$ exists.
3. $\lim_{x \rightarrow a} f(x) = f(a)$.

If $f(x)$ is not continuous at $x = a$ we say it is **discontinuous** at $x = a$.

If f is continuous **at every point** in its domain, we say f **is continuous**.

Many functions are continuous, e.g. all polynomial functions, **most** trigonometric functions (not **tan**), $|x|$, and so on.

Recall... continuity

Example

Consider the function

$$f(x) = \begin{cases} x + 1, & x < 2 \\ bx^2, & x \geq 2 \end{cases}$$

For what value of b is f continuous at $x = 2$?

Recall... continuity

Example

For what values of x is $f(x) = \frac{2x + 1}{2x - 2}$ continuous?

Types of discontinuity

We have encountered three types of discontinuity.

- **Removable discontinuity:** $\lim_{x \rightarrow a} f(x)$ exists but

$$\lim_{x \rightarrow a} f(x) \neq f(a)$$

- **Jump discontinuity:** $\lim_{x \rightarrow a^-} f(x)$ and $\lim_{x \rightarrow a^+} f(x)$ both exist (and are finite), but $\lim_{x \rightarrow a^-} f(x) \neq \lim_{x \rightarrow a^+} f(x)$
- **Infinite discontinuity:** At least one of the one-sided limits does not exist.

Types of discontinuity

Example

Each of the following functions has a discontinuity at $x = 2$.
Classify it.

1. $f(x) = \frac{x^2 - 4}{x - 2}$

2. $g(x) = \frac{x^2}{x - 2}$

3. $h(x) = \begin{cases} x/2 & x < 2 \\ -2 & x = 2 \\ x^2 - 3 & x > 2. \end{cases}$

4. $h(x) = \begin{cases} x/2 & x < 2 \\ x^2 - 2 & x > 2. \end{cases}$

Intermediate Value Theorem

Continuous functions have numerous important properties, many of which we will study in MA140. The first of these is the **Intermediate Value Theorem**.

Intermediate Value Theorem (IVT)

Suppose that $f(x)$ is continuous on an interval $[a, b]$.

Let z be any real number between $f(a)$ and $f(b)$.

Then there exists a number $c \in [a, b]$ such that $f(c) = z$.

- ▶ If you travel by train from Galway to Athlone, then there must be a time when you are at Oranmore station, and a time when you are at Athenry, and at Woodlawn, etc.
- ▶ If your car is stopped, and then accelerates to 100km/h, there was a time when it was travelling at 30 km/h.
- ▶ Last week, a packet of 20 cigarettes cost €17. Since the budget on Tuesday, they cost €18. But there wasn't a day when they cost, say, €17.50, because the price had a jump discontinuity (so the IVT does not apply here).

Example

Sketch an example of a function for which the IVT does *not* hold.

One of the main applications of the IVT is in establishing if an equation has a solution:

Solutions to $f(x) = 0$

If $f(x)$ defined on $[a, b]$ is such that $f(a) < 0$ and $f(b) > 0$, then there must be a value $c \in [a, b]$ such that $f(x) = 0$.

More generally, if $f(a)f(b) \leq 0$, then $f(x)$ has at least one zero in $[a, b]$.

Example

Show that $f(x) = x - \cos(x)$ has at least one zero.

Given a function $f(x)$,

- ▶ When we say c is a **zero** of a function, f , we mean that $f(c) = 0$.
- ▶ Many books and website also use the terminology “ c is a **root** of f ”. This is particularly the case where $f(x)$ is a polynomial.
- ▶ If c is a zero of $f(x)$, then it is a solution to the equation $f(x) = 0$.

Example

How many solutions does $x^3 + 1 = 3x^2$ have?

Q 1(c) from 2019 Exam

Use the *Intermediate Value Theorem* to show that the equation

$$2x^3 + 3x^2 - 2x - 1 = 0$$

has three solutions in the range $-2 < x < 1$.

Exercises

Exercises 3.3.1 (Based on Q1(a), 23/24)

$$\text{Let } g(x) = \begin{cases} 3 & x \leq 0 \\ 2x + 1 & 0 < x < 1 \\ x^2 & x \geq 1. \end{cases}$$

- (i) Sketch the graph of $g(x)$ on the interval $[-3, 4]$, making use of the empty and full circle notation.
- (ii) Compute $\lim_{x \rightarrow 1^-} g(x)$ and $\lim_{x \rightarrow 1^+} g(x)$. Is g continuous at $x = 1$. If not, classify the type of discontinuity.

Exercise 3.3.2

For what values of b and c is $f(x) = \begin{cases} x^2 + 1 & x \leq -1 \\ x + b & -1 < x < 1 \\ cx^2 & x \geq 1. \end{cases}$
continuous at $x = -1$ and $x = 1$?

Exercise 3.3.3 (23/24 Q(1)(c)(ii))

Use the IVT to show that the equation $x^3 - 3x + 1 = 0$ has three solutions in the range $-2 < x < 2$.
