

MA378: Tutorial Sheet 2

In all the questions below, when needed, the function f is

$$f(x) = \ln(x)$$

1. (a) Write down the Lagrange form for the polynomial, $p_2(x)$, that interpolates f at the points $x_0 = 1$, $x_1 = 2$, and $x_2 = 3$.
(b) What bound does Equation (1) give for $|f(4/3) - p_2(4/3)|$?

2. (a) Give a formula for the piecewise linear interpolant, $l(x)$, that interpolates f , at the points $x_0 = 1$, $x_1 = 2$, and $x_2 = 3$.
(b) Use Equation (2) to give an upper bound for $\|f(x) - l(x)\|_\infty$.
(c) What value of N would you have to choose so that $\|f - l\|_\infty \leq 10^{-6}$?

3. Suppose that S is a natural cubic spline on $[0, 2]$ with

$$S(x) = \begin{cases} -x + 2(1-x) + a(1-x)^3 + \frac{2}{3}x^3, & \text{for } 0 \leq x < 1, \\ b(2-x) + c(2-x)^3 + d(x-1)^3, & \text{for } 1 \leq x \leq 2. \end{cases}$$

Find a, b, c , and d .

Some useful formulae.

- Cauchy's theorem: If p_n is the polynomial of degree n that interpolates f at the $n+1$ points $a = x_0 < x_1 < \dots < x_n = b$. Then, for any $x \in [a, b]$ there is a $\tau \in (a, b)$ such that

$$f(x) - p_n(x) = \frac{f^{(n+1)}(\tau)}{(n+1)!} \pi_{n+1}(x), \quad (1)$$

where $\pi_{n+1}(x) = \prod_{i=0}^n (x - x_i)$ denotes the nodal polynomial.

- $\|g\|_\infty := \max_{a \leq x \leq b} |g(x)|$.
- If l is the linear spline interpolant to a function f on the equally spaced points $a = x_0 < x_1 < \dots < x_N = b$ with $h = x_i - x_{i-1} = (b-a)/N$, then

$$\|f - l\|_\infty \leq \frac{h^2}{8} \|f''\|_\infty. \quad (2)$$
